AI-Powered Vision for Tomorrow's Security

Advanced Video Intelligence Software

AIEYE delivers next-generation video intelligence designed for modern security environments. Built on a powerful AI engine, the platform seamlessly fits into any infrastructure—whether fully on-premises, isolated air-gapped networks, cloud deployments, or a hybrid architecture.

With its flexible design, AIEYE empowers organizations to customize and scale their surveillance workflow without limitations. The system enhances situational awareness, automates monitoring, and transforms ordinary video streams into actionable insights.

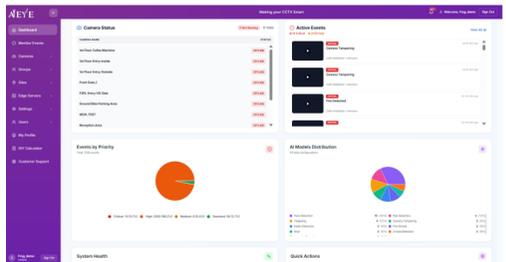

Engineered for reliability, AIEYE performs consistently across diverse conditions, from controlled indoor spaces to demanding and high-risk environments. It ensures that every frame is analyzed with precision, helping users strengthen safety, efficiency, and operational control.

Stop Watching. Start Knowing.

Stop staring at video walls. Let AIEYE™ do the watching for you.

AI EYE's real-time video analytics instantly identifies potential threats as they happen. By intelligently analyzing live video feeds across vast areas and multiple cameras at once, AIEYE transforms passive surveillance into proactive security.

Receive precise, actionable alerts the moment something matters—enabling faster response, reduced risk, and complete situational awareness without constant manual monitoring.

AIEYE™ vs Camera-Based Analytics

AIEYE™ is an open AI video analytics platform designed to work seamlessly with any camera brand or model. This camera-agnostic approach gives customers and system integrators complete freedom—allowing them to combine existing cameras, newer models, and even multiple brands within the same deployment. No vendor lock-in. No forced upgrades. Just flexibility.

Future-Proof Your Surveillance System

Traditional camera-based analytics are tightly bound to proprietary hardware. They only function with the manufacturer's own cameras, and often require AI-enabled models that are significantly more expensive than standard IP cameras. These analytics cannot be easily moved or scaled across different camera types.

As a result, use cases remain limited—and customers are forced to replace cameras instead of maximizing the value of their existing surveillance infrastructure.

Software & AI Analytics are branded under AIEYE.

- ✓ Tailgating
- ✓ Crowd Detection
- ✓ Camera Tampering
- ✓ Fallen Detection
- ✓ Cross-Line Detection
- ✓ Intrusion Detection
- ✓ Fire and Smoke Detection
- ✓ Human behavior Detection
- ✓ Missing Object Detection
- ✓ Advance Motion Detection
- ✓ FRS-Facial Recognition System
- ✓ ANPR-Automatic Number Plate Recognition
- ✓ And Many More.....
